Informatics graduate from Universitas Atma Jaya Yogyakarta specializing in Backend Software Engineering. Experienced in designing scalable architectures, optimizing system performance, and managing caching using Golang and Redis, complemented by proficiency in building functional web applications with Laravel and Next.js. Highly committed to writing clean, maintainable code through the implementation of software design patterns, containerization, and continuous integration (CI) pipelines.

CORE SKILLS

- **Primary Programming Languages:** Go, SQL (PostgreSQL, MySQL, MariaDB).
- **Core Technologies & Frameworks:** Go Fiber, GORM, Redis, Docker Compose, GitHub Action (CI).
- **Previously Used:** PHP (Laravel), TypeScript (Next.js), C, Dart (Flutter), Power BI, Tableau.

PROFESSIONAL EXPERIENCE

Run System - MSIB | *Backend Engineer Intern*

September 2024 – January 2025

- Developed and optimized a web-based ERP application, specifically focusing on the Inventory Material Management module.
- Collaborated with cross-functional teams to design scalable backend APIs using Golang.

Universitas Atma Jaya Yogyakarta | *Data Structures & Information*

July 2023 – December 2023

Teaching Assistant

- Mentored over 30 students during weekly practical lab sessions focused on fundamental data structures and algorithm logic using the C language.
- Conceptualized and engineered lab modules, practical assignments, and evaluation criteria alongside senior faculty members.

PROJECTS

Furina – GI Material Tracer | *Golang, Fiber, GORM, PostgreSQL, Docker,*

April 2026 – Present

GitHub Action

- Designed a RESTful API for a Genshin Impact material tracking system, applying Clean Architecture principles to decouple core business logic from external infrastructure.
- Implemented a secure authentication workflow utilizing JWT (JSON Web Token) and developed customized database validations to ensure data integrity.
- Enhanced local development efficiency by containerizing the application using Docker Compose.
- Built automated Continuous Integration (CI) pipelines using GitHub Actions to enforce code formatting standards (`go fmt`), static analysis (`go vet`), and unit testing on every push event.

Web-Based ERP – Procurement & Inventory (Undergraduate Thesis) |

March 2025 – July 2025

Golang, Next.js, MySQL, Redis

- Designed a web-based ERP subsystem to manage procurement workflows and automate inventory deduction.
- Developed a responsive administrative interface utilizing Next.js.

Bakery E-Commerce & Academic Project | *Laravel, Flutter, MySQL*

July 2023 – June 2024

- Built an integrated multi-platform ordering system, featuring a web dashboard for administrative staff and a mobile application for customer orders.
- Formulated backend business logic using Laravel and constructed the mobile user interface using Flutter.

EDUCATION

Universitas Atma Jaya Yogyakarta | *Bachelor of Science in Informatics*

November 2025

- **GPA:** 3.78/4.00 (Cum Laude)
